OP Integrated Advanced Flight Deck Now Shipping with Mode S

Beaverton, OR—May 1, 2006 — Op Technologies today announced that the OP Integrated Advanced Flight Deck is now shipping with a Mode S transponder with TIS. OP Integrated is the only completely integrated avionics package for experimental and home-built aircraft and now with the addition of a remotely-mounted Mode S transponder, TIS information is available without the need for a panel-mounted transponder. Radio frequencies and transponder functions are controlled through the EFIS or MFD display units, eliminating the need for a radio stack and freeing up valuable instrument panel space. Availability of the integrated Mode S transponder is immediate for new orders.
